Test case: AL-21

Story: As a borrower, I see the current status of my application

Tested by: Ibrahima Toure
Date run: 6 Nov 2026
Build: `main` at commit `66e32f0`

Preconditions

- Firebase emulators started with the seed data (`firebase emulators:start --project demo-al --import=./seed-data` in `al-core`), al-core and al-ai running locally, the app on the iPhone 17 simulator. Seeded logins use the demo password from `al-core/scripts/seed.js`.
- Signed in as alice@test.com, who has a submitted application.

Steps

#	Criterion	Steps	Expected result	Automated check	Result
1	1	Open the application from Home.	A vertical timeline of Draft, Applied, AI Deliberated, Underwriter Approved or Declined, Funded, Closed. Finished steps show the date they were reached.	StatusTimelineTests: FinishedStepsShowTheDateTheyWereReached and the per-status tests	[x] Pass [ ] Fail
2	2	With the status screen open, change the application's `status` to the next state in the Emulator UI (localhost:4000).	The screen shows the new status within 5 seconds, with no refresh.	UI: LiveStatusUITests.StatusScreenShowsANewStatusWithoutARefresh; unit: ApplicationStatusViewModelTests.AStatusChangeShowsWithoutARefresh	[x] Pass [ ] Fail
3	3	Sign in as ben@test.com and open the declined application.	The Declined step shows the reason the underwriter gave.	StatusTimelineTests: ADeclineWithAReasonShowsIt, ADeclineWithoutAReasonHasNoReasonLine	[x] Pass [ ] Fail
4	4	With the status screen open, turn off the Mac's network (or stop the emulators).	The last known status stays on screen with an "Offline" banner. Turning the network back on removes the banner.	ApplicationStatusViewModelTests: LosingThePhonesConnectionShowsTheBannerOverTheLastStatus, TheBannerGoesWhenTheConnectionComesBack	[x] Pass [ ] Fail
5	5	Compare each status badge with the portal's badge for the same status.	Same names and palette A colours.	StatusTimelineTests.OnlyTheCurrentStepHasABadgeInItsStatusColour	[x] Pass [ ] Fail

Automated test run

iOS unit tests (`AgenticLenderTests`) on `main` at `66e32f0`, iPhone 17 simulator (iOS 26.5), 6 Nov 2026: **651 passed, 0 failed, 0 skipped**. The UI tests named above (`AgenticLenderUITests`) need the emulators running and were not part of this run.

Notes

- Step 2: the status was changed by hand in the Emulator UI (`app-applied`, Applied -> AI Deliberated), so the new step had no date and showed "Now". It was set back to Applied afterwards.
- Step 3: Home shows the newest-created application, so Ben's declined one (`app-declined`) was brought forward by setting its `createdAt` to 6 Oct, then put back to 20 Sep. That edit is why its Draft date read 6 Oct.
- Step 4: turned the Mac's Wi-Fi off with the status screen open; the Offline banner showed over the last status and went when Wi-Fi came back.
- Step 5: compared the app's status badges with the portal's (signed in as bob@test.com on localhost:5173); names and colours match.
