Test case: AL-152

Story: As an underwriter, I reply to a borrower's messages as the bank lending officer

Tested by: Nikoloz Chilachava
Date run: 10 Nov 2026
Build: `feature/AL-167-underwriter-message-borrower` at commit `68fca96` (PR #194, open)

Preconditions

- Firebase emulators started with the seed data from main's al-core (`firebase emulators:start --project demo-al --import=./seed-data` in `al-core`), and the portal running (`npm run dev` in `al-web`). Seeded logins use the demo password from `al-core/scripts/seed.js`.
- The al-core API running locally against the emulators (messages are sent through it).
- Signed in as uma@test.com (underwriter).

Steps

#	Criterion	Steps	Expected result	Automated check	Result
1	1	Open the loan file for `app-approved`, click "Message borrower" and send a message. Then sign in as ciara@test.com and open the same thread.	The borrower's thread opens and the message is sent, marked "Bank lending officer".	loan-file.test.tsx, Conversation.test.tsx, messagesService.test.ts	[x] Pass [ ] Fail
2	2	Sign in to the borrower's iOS app as Ben Walsh and open Messages.	Ben sees the message in the same thread, labelled with the sender's role.	Mobile (AL-42)	[ ] Pass [ ] Fail
3	3	Post to a thread as an underwriter, as the client's broker and as another broker.	Underwriters can post to any borrower's thread, brokers only to their own clients' threads (rules test).	Backend rules test (al-core, messaging subtask)	[ ] Pass [ ] Fail

Automated test run

al-web Vitest on `feature/AL-167-underwriter-message-borrower` at `68fca96`, 10 Nov 2026: **601 passed, 0 failed**. The build (`npm run build`: `tsc -b` then `vite build`) passed.

Notes

- Step 1: "Message borrower" opened Ben Walsh's thread ("No messages yet."). I sent "Hi Ben, your HELOC note has been minted. A surveyor will be in touch about the valuation.", which showed at once as "You, 10 Nov, 09:45". Firestore stored it with `senderRole` underwriter and `senderId` underwriter1, both set by the API from the token. In Ciara's broker view it showed labelled "Bank lending officer".
- Step 2: Not run yet: checking the message in Ben's thread in the iOS app on the simulator.
- Step 3: Not run yet by me. Who may post is decided by al-core (`POST /core/applications/{id}/messages`); its tests are al-core's.
- The message stays in the emulator data. Re-import the seed data to reset it.
