Test case: AL-33

Story: As an underwriter, I open a loan file with the borrower's full DTI breakdown

Tested by: Nikoloz Chilachava
Date run: 28 Oct 2026
Build: `feature/AL-158-loan-file-page` at commit `35a017b` (PR #117), merged into `main` on 29 Oct 2026 as `b8cb08c`

Preconditions

- Firebase emulators started with the DTI seed data from Dumi's PR #121 (the DTI breakdown fields), and the portal running (`npm run dev` in `al-web`). Seeded logins use the demo password from `al-core/scripts/seed.js`.
- Signed in as uma@test.com (underwriter) for steps 1 to 3, and as ciara@test.com (broker) for step 4.

Steps

#	Criterion	Steps	Expected result	Automated check	Result
1	1	Open the loan file for `app-funded`, `app-deliberated` and `app-closed`.	Gross income (per applicant and total), take-home pay, existing debts, living costs, the repayment at the benchmark and stressed rates, DTI and surplus at both rates, and the band for each.	loan-file.test.tsx	[ ] Pass [ ] Fail
2	2	Compare every figure with the stored application and review documents in the Emulator UI, and read the stressed column's label.	Every figure matches the record. The stressed figures are labelled with the stress margin (+2 points).	loan-file.test.tsx	[ ] Pass [ ] Fail
3	3	On the same loan file, look for the borrower details, the property and the collateral panel.	All three are on the same page.	loan-file.test.tsx	[ ] Pass [ ] Fail

4	4	As ciara@test.com, open Alice's `app-funded` by its URL, then her own client Ben's HELOC `app-approved`.	Alice's file is refused. Ben's file opens, with no decision controls.	loan-file.test.tsx	[x] Pass [ ] Fail

Automated test run

al-web Vitest on `feature/AL-158-loan-file-page` at `35a017b`, 28 Oct 2026: **352 passed, 0 failed**.

Notes

- Steps 1 and 2: seen in the browser and matched with the seed: `app-funded` DTI 21.6% offered and 26.4% stressed (seed 21.61 and 26.44), surplus €1,516 and €1,161 (seed 1515.50 and 1161.30), DTI band Comfortable, surplus band Comfortable. `app-deliberated`: 36.2% and 41.4%, €835 and €511, Caution and Comfortable. `app-closed`: 24.3% and 29.1%, €533 and €254, Comfortable and Caution. Not run yet: the record of this run covers DTI, surplus and the bands only. To run: re-open the three files and compare gross income per applicant and total, take-home pay, debts, living costs, both repayments and the stress margin label with the seed.
- Step 3: Not run yet: on `main` the collateral section is still a placeholder; the mortgage collateral panel comes with the collateral panel PR (#188, open). To run: once #188 merges, check that borrower details, property and collateral panel are on one page.
- Step 4: Ciara saw "Application not available" for Alice's `app-funded`. Ben's HELOC opened with no decision controls, DTI 20.1% and 21%.
- No console errors during the run.
