AL-131: As a data scientist, the valuation endpoint returns how much each house feature added to or took off the estimate

What was built

I added exact Shapley values to the valuation endpoint, so every estimate comes with a baseline and a euro piece for each of the six inputs. There are only six inputs, so it's just 64 combinations and I could work them out exactly instead of approximating. If the breakdown fails the estimate still comes back with a warning.

Pull requests

PR	Title	Merged	By
#106	AL-134 Add exact Shapley contributions for each estimate	2026-10-27	Nic
#109	AL-135 Add the breakdown to the valuation response	2026-10-27	Nic
#123	AL-135 Put the background sample in the Docker image	2026-10-29	Nic
