# AL-26: As an underwriter, a valuation agent flags overvalued collateral and computes LTV

## What was built

I wrote the valuation checks in code first, so the price gap, the "price needs review" flag and both LTVs never come from the LLM. The agent only gets those results to explain. That means it can't make up a figure, or recommend Approve over a flag the code has set. It runs on Groq gpt-oss-120b instead of Mistral, which has no free API, and Gemini Flash-Lite is the backup that a person switches to by hand.

## Pull requests

| PR | Title | Merged | By |
|---|---|---|---|
| #105 | AL-122 Add the valuation checks | 2026-10-27 | Nic |
| #115 | AL-123 Add the valuation agent step | 2026-10-29 | Nic |
| #124 | AL-123 Record the Groq decision and make Gemini Flash-Lite the backup | 2026-10-29 | Nic |
